## PROFESSIONAL SUMMARY

Final-year Computer Science student who builds and ships full-stack projects independently — from a multi-agent AI system with persistent memory (ChaosOS) to production-deployed web apps on Next.js and TypeScript. Comfortable across the stack: React/Next.js on the frontend, Python and Java on the backend, REST API design in between. Seeking a software development internship where I can ship real features, not just tickets.

## TECHNICAL SKILLS

- **Frontend:** HTML, CSS, JavaScript, TypeScript, React.js, Next.js, Tailwind CSS
- **Backend & APIs:** Python, REST API design & integration, server-side fundamentals
- **Languages:** Python, Java, JavaScript/TypeScript, C, C++
- **Core CS:** Data Structures & Algorithms, OOP, Multithreading, Collections, Exception Handling
- **Tools:** Git, GitHub, Vercel, Figma

## EXPERIENCE

**Java Developer Intern** — CODTECH *June–July 2024*

- Built and shipped 4 Java-based modules — a file handling utility, REST API endpoints, a multithreaded chat application, and a book recommendation system — applying OOP, multithreading, and exception handling independently for each.
- Worked through the full development cycle — design, implementation, testing — against sprint deadlines, delivering all 4 modules on schedule.

## SELECTED PROJECTS

**ChaosOS — Autonomous Multi-Agent AI System** *Next.js | TypeScript | Groq API*

- Architected a multi-agent AI system where agents coordinate, recover from failures, and resume interrupted tasks — solving the "agent gets stuck and dies" problem common in autonomous AI workflows.
- Built persistent memory with HydraDB so agents retain context across sessions instead of restarting cold on every run.
- Implemented activity tracking and command handling for real-time visibility into agent state; deployed live on Vercel.

**StudyWiki-AI — Educational Web Platform** *React | Next.js | APIs*

- Built an educational platform with interactive learning workflows, structuring content delivery so users could navigate multi-step material without losing progress.
- Integrated third-party APIs to pull and structure learning content dynamically, reducing manual content updates.

**Multithreaded Chat Application** *Java*

- Designed a real-time Java chat application using multithreading and thread synchronization to handle multiple concurrent client connections without blocking.
- Used thread pooling and Java concurrency APIs to manage parallel tasks efficiently, improving resource utilization over a naive one-thread-per-client approach.

**Personal Portfolio Website** *Next.js | TypeScript | Framer Motion*

- Built and deployed a responsive, animated portfolio site with clean routing and optimized page load performance.
- Used Framer Motion for interaction design and Tailwind CSS for a consistent, maintainable style system.

## EDUCATION

**B.Tech in Computer Science and Engineering — SDGI Global University** *2023 – 2027*

*Final-year undergraduate student*

## CERTIFICATIONS & ACHIEVEMENTS

- HackerRank: Java, Python, Problem Solving — solved problems available on request/profile link
- Google / Coursera: Crash Course on Python
- Active open-source contributor — ongoing project development on GitHub, including participation in software and AI hackathons
